

Decryption on the Fly

The longer a company is without its data, the greater the cost. Kroll Ontrack's new automated decryption technology allows engineers to target only areas of the hard drive that have been used while also automating the decryption process – dramatically improving the typical industry recovery time from days to hours.

IT downtime

costs North American companies

\$26.5 billion per year¹

at an average cost of

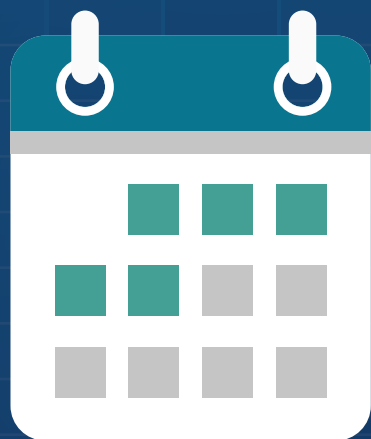

\$42,000 per hour²

Cost of downtime
per hour per employee

= **on average is**

\$205.55³

Most recovery projects involving
encrypted drives
take an average of **five days to
complete** using traditional solutions.⁴

Kroll Ontrack's new automated
decryption technology
cuts recovery time
from days to hours.
